5.3 Inverse functions

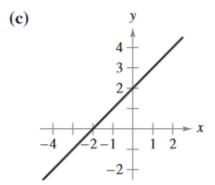

Juan J. Moreno Santos January 2024 1 The graph of the function with the graph of its inverse function. [The graphs of the inverse functions are labeled (a), (b), (c), and (d).]

(a)

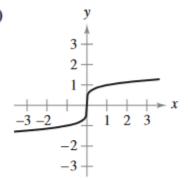

(b)

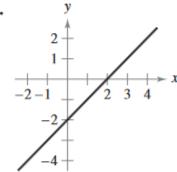

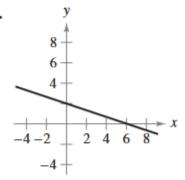

(**d**)

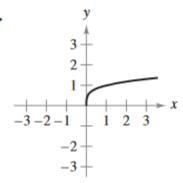

9.

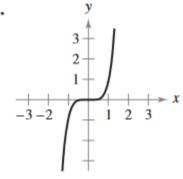

10.

11.

12.

10 matches (b) and 12 matches (d)

- Use a graphing utility to graph the function. Then use the Horizontal Line Test to determine whether the function is one-to-one on its entire domain and therefore has an inverse function.
- 16. $f(x) = \frac{x^2}{x^2+4}$ The function is not one-to-one and doesn't have an inverse.
- Find the inverse function of f, (b) graph f and f^{-1} on the same set of coordinate axes, (c) describe the relationship between the graphs, and (d) state the domain and range of f and f^{-1} .

28.

$$f(x) = x^2 = y, \ x \ge 0 \tag{1}$$

$$x = \sqrt{y} \tag{2}$$

$$x = \sqrt{y}$$

$$y = \sqrt{y}$$
(2)
(3)

$$f^{-1}(x) = \sqrt{x} \tag{4}$$

f and f^{-1} reflect each other on the line y=x. The domain and range of f are $x\geq 0$ and $y\geq 0$ respectively, and the domain and range of f^{-1} are $x \ge 0$ and $y \ge 0$ respectively.

Word problems

40. The formula $C = \frac{5}{9}(F - 32)$, where $F \ge 459.6$, represents Celsius temperature C as a function of Fahrenheit temperature F.

(a) Find the inverse function of C

$$\frac{9}{5}F - 32\tag{1}$$

$$\frac{9}{5}F - 32\tag{1}$$

$$F = 32 + \frac{9}{5}C\tag{2}$$

- (b) What does the inverse function represent? It represents the temperature conversion from degrees Celsius to Fahrenheit.
- (c) What is the domain of the inverse function; Validate or explain your answer using the context of the problem.

$$F \ge -459.6, \ C = \frac{5}{9}(F - 32) \ge -273.11 :: \text{Domain:} C \ge -273.1 = -273\frac{1}{9}$$
 (1)

(d) The temperature is 22°C. What is the corresponding temperature in degrees Fahrenheit?

$$F = 32 + \frac{9}{5}(22) = 71.6^{\circ}F \tag{1}$$

Use the derivative to determine whether the function is strictly monotonic 5 on its entire domain and therefore has an inverse function.

42.

$$f(x) = x^3 - 6x^2 + 12x (1)$$

$$f'(x) = 3x^2 - 12x + 12 = 3(x - 2)^2$$
(2)

f is strictly monotonic and has an inverse because it's increasing on $(-\infty, \infty)$.

46.

$$f(x) = \cos\frac{3x}{2} \tag{1}$$

$$f'(x) = -\frac{3}{2}\sin\frac{3x}{2} = 0 \text{ when } x = 0, \frac{2\pi}{3}, \frac{4\pi}{3}, \cdots$$
 (2)

- 6 Determine whether the functions is one-to-one. If it is, find its inverse function.
- 60. f(x) = -3

Doesn't have an inverse since it's not one-to-one.

62.

$$f(x) = ax + b \tag{1}$$

f is one-to-one and has an inverse.

$$ax + b = y \tag{1}$$

$$x = \frac{y - b}{a} \tag{2}$$

$$y = \frac{x - b}{a} \tag{3}$$

7 Delete part of the domain so that the function that remains is one-to-one. Find the inverse function of the remaining function and give the domain of the inverse function.

64.

$$f(x) = 16 - x^4$$
 will be one-to-one for $x \ge 0$ (1)

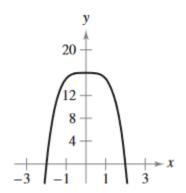

$$16 - x^4 = y \tag{2}$$

$$16 - y = x^4 \tag{3}$$

$$\sqrt[4]{16 - y} = x^4$$
 (4)

$$\sqrt[4]{16 - x} = y \tag{5}$$

$$f^{-1}(x) = \sqrt[4]{16 - x}, \ x \le 16 \tag{6}$$

8 Decide whether the function has an inverse function. If so, what is the inverse function?

68. h(t) is the height of the tide t hours after midnight, where $0 \le t \le 24$.

The function doesn't have an inverse because there could be two times $t_1 \neq t_2$ for which $h(t_1) = h(t_2)$.

70. A(r) is the area of a circle of radius r.

Yes. The function is one-to-one since it's increasing. Its inverse yields the radius r that corresponds to the area A.

9 Verify that f has an inverse. Then use the function f and the given real number a to find $(f^{-1})'(a)$.

72.

$$f(x) = 5 - 2x^3, \ a = 7 \tag{1}$$

$$f'(x) = -6x^2 \tag{2}$$

f is decreasing on $(-\infty, \infty)$. Therefore, f has an inverse and is monotonic.

$$f(-1) = 7 \Rightarrow f^{-1}(7) = -1 \tag{3}$$

$$(f^{-1})'(7) = \frac{1}{f'(f^{-1}(7))} = \frac{1}{f'(-1)} = \frac{1}{-6(-1)^2} = \frac{-1}{6}$$
(4)

76.

$$f(x) = \cos 2x, \ a = 1, \ 0 \le x \le \frac{\pi}{2} \tag{1}$$

$$f'(x) = -2\sin 2x < 0 \text{ on } (0, \frac{\pi}{2})$$
 (2)

f has an inverse since it's monotonic on $[0, \frac{\pi}{2}]$.

$$f(0) = 1 \Rightarrow f^{-1}(1) = 0 \tag{3}$$

$$(f^{-1})'(1) = \frac{1}{f'(f^{-1}(1))} = \frac{1}{f'(0)} = \frac{1}{-2\sin 0} = \frac{1}{0} = \text{undefined}$$
 (4)

80.

$$f(x) = \sqrt{x-4}, \ a = 2, \ x \ge 4$$
 (1)

$$f'(x) = \frac{1}{2\sqrt{x-4}} > 0 \text{ on } (4, \infty)$$
 (2)

f has an inverse since it's monotonic on $[4, \infty]$
